ABSTRACT

5 A piezoelectric actuator, the manufacturing method of the same
and the head suspension assembly using the same are disclosed,
wherein the piezoelectric actuator can be disposed easily without any
breakage in mounting and can provide a magnetic head with fine
displacements efficiently. A more specifically, a first coupling portion
and a second coupling portion are provided to couple the first
10 piezoelectric element unit in parallel with the second piezoelectric
element unit without being influenced each other by respective
displacements. The configuration can provide a head suspension
assembly with a high head positioning accuracy
